DETAILED ACTION

1. The preliminary amendment filed June 10, 2002 has been received and entered.
2. Claims 1-7 have been cancelled.
3. Claims 8-20 have been added.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 8-16 are rejected under 35 U.S.C. 102(a) as being anticipated by Sempere et al. (Immunology (December 1999), vol. 98, suppl. 1, pp. 105).

Applicant's claims are drawn towards a method of inhibiting the expression of adhesion molecules, inhibiting inflammation, and immuno-modulation using a water-soluble and a lipid-soluble extract from *Polypodium*.

Sempere teaches using a *Polypodium* extract, Anapsos, to modulate the expression of adhesion molecules. The extract modulates CD11a, CD11b, CD18, CD54, and CD6L and reduces inflammation. The reference does not specifically state that the Anapsos contains 118 mg of a water-soluble fraction and 2 mg of a lipid soluble-fraction; however, in applicant's specification, applicant has stated that Anapsos contains these fractions (see page 1, first paragraph of specification).

Art Unit: 1651

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

5. Claims 15-16 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. No. 5,601,829.

US '829 teaches modulating the immune system using 118 mg of a water soluble extract and 2 mg of a lipid soluble extract from *Polypodium* (see column 2, last paragraph and bottom of column 4).

6. Claims 8-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Sempere et al. (Br. J. Clin. Pharmacol. (1997), vol. 43, no. 1, pp. 85-89).

Sempere teaches using Anapsos to reduce inflammation and modulate the immune system (see page 88). Sempere does not specifically teach that Anapsos inhibits the expression of adhesion molecules; however, adhesion molecules are an essential part of the inflammatory response. Since the reference teaches administering Anapsos to reduce inflammation, the method taught by the reference would inherently have the effect of reducing adhesion molecules.

7. Claims 8-16 are rejected. Claims 17-20 are free of the prior art and are allowable.
